Encoding scheme for requests and orders:

2 - sheath material - core material - line resistance [Ohm/m] - diameter [mm]

Example:

2-I-NC-9,1-3,0: single core heater, sheath: „I“ (Inconel600), core: Nicr80/20, line resistance: 9,1Ohm/m, 3,0mm sheath diameter

Dual-core heater (sold by the meter)

ThermSys manufactures heaters in standard and customized designs with dedicated properties in line resistance and sheath materials

**Technical data's / Handling:**

- Resistance tolerance: +/-10% (standard)
- Sheath-Ø-tolerance: +/-0,05mm
- Core material: NiCr80/20 (standard)
- Sheath material: VA4 or I (standard)
- Bending radius: 2 - 3 x sheath-Ø
- Do not bend heater to often - depending from bending ratio and accumulated plastic deformations of the heater materials !
- Manufacturing lengths 40 - 200m depending on the sheath diameter
- Max. voltage / power over sheath depending on sheath diameter, temperature gradient heater to heated parts / thermodynamic max. possible flow energy from heater to heated part and heating up cycles. Please refer to our technical sheet "Handling and operation of ThermSys mineral insulated heaters and applications" we send on request or you can download on our website.
- Mineral insulation: Magnesium Oxide (MgO), other insulation on request
- Recommended use:  
Stainless steel sheath up to 600°C,  
Inconel600 sheath up to 1000°C
